PRICES START AT $1750

Please note that prices are subject to change at the manufacturers’ discretion; the prices given on this document stand correct as of today’s date. Shipping fees to be calculated and may vary depending on location.

What is an AED?
An Automated External Defibrillator (AED) is a portable electronic device that when used by a bystander can shock a heart back into normal (sinus) rhythm.

When do I need an AED?
An AED should ONLY be used during Sudden Cardiac Arrest events (SCA). If located and used quickly they increase the chance of survival to over 50%.

Who can use an AED?
ANYONE can use an AED, of any age or occupation, as long as they are able to follow verbal instructions provided by the device. You cannot cause any further harm by using an AED and as the device provides clear instructions you do not require any official training to operate the device.

AED Guardianship
When an AED is placed a guardian will be assigned to monitor maintainence and regular checks to ensure that the device is always in good working order.
