Syncope Trust And Reflex anoxic Seizures

Jack has RAS

Working together with individuals, families and medical professionals to offer support and information on syncope and reflex anoxic seizures

What is RAS?

Reflex anoxic seizures (RAS) are a kind of fainting that some children experience when they hurt themselves or have a surprise (which can be nasty or nice). RAS can happen when you fall over, have a nasty bump or even when you are not feeling very well. Sometimes you might faint when you have an injection or run and jump into a cold swimming pool. A big brother or sister saying 'boo' can make you feel faint as well.

Can you help Harry the Hedgehog find the right path to his RAS badge? Also, see how many times you can spot Harry in this book!

My name is Jack
and I have RAS!

Last week my sister Alice was chasing me around the garden. I was running so fast that I tripped over and hurt myself.

Alice called daddy. She was frightened because I looked as if I was asleep on the ground. My body looked stiff but my legs and arms were moving. Alice said I was very pale. Then I woke up and felt very tired and upset.

I went to the hospital and saw Dr. Baker.
She was very nice.

Dr. Baker did a test. I sat very still and had some sticky pads on my chest. They were attached to a machine with a long piece of paper coming out of it. It did not hurt one bit!

"I think you have Reflex Anoxic Seizures (Ree-fleks An-ox-sik See-jurs), also known as RAS,"
Said Dr. Baker with a big smile.

"Think of a hedgehog!

Whenever the hedgehog faces danger it curls into a ball shutting itself off from the world to protect itself and only uncurls when it is sure it is safe to do.

"This is very similar to children with RAS; their body shuts down until the 'nasty thing' has gone away."

The other day, Alice and I were playing in the sitting room. She bumped into me by mistake and knocked me over.

It gave me a fright and I fainted.

When I woke up, daddy was by my side and talking to me softly.

I laid on the floor until I felt a bit better.

Then I got onto the sofa with my favorite teddy and had a little nap.

Alice was crying and thought that she was to blame for my fainting. Daddy gave her a hug and told her it wasn't her fault, which made her feel better too.

MONDAY MORNING

While mommy was helping me get ready for school I had butterflies in my tummy.

“What would happen if I hurt myself and fainted at school?”

I didn't need to worry though because when daddy took me into school he spoke to my teacher, Mrs Edwards about RAS.

Daddy also told Mrs Edwards that if I fainted, I might wake up tired and upset. I would need lots of hugs and somewhere to rest.

Mrs Edwards told us that the school had a place where children who need a rest can lie down, while they wait for someone to take them home.

In class I have lots of friends and still join in with all the activities. Mrs Edwards has promised that she will tell me if she thinks something will scare me or make me jump!

A FEW

WEEKS LATER
When Dr. Baker

told me I had RAS I felt sad
because I thought that I would not be able to
play with my friends like I used to.

I can still play though! I go swimming with my friend
Sam every week. Before I get in I like to sit on
the side and get used to the cold water otherwise
it might be a shock. After a few minutes, I swim
and splash like everyone else.

I also still have to have my vaccinations!
When I go to the doctors, the nurse tells
me that it might hurt so I am not scared
or jump when I feel the scratch.

I have just started
Karate classes. It is
really cool!

So you see, having RAS does not stop you
from having fun.
